

MATHEMATICAL ASSOCIATION OF AMERICA
AMERICAN MATHEMATICS COMPETITIONS
PRESENTED BY THE AKAMAI FOUNDATION

20th Annual

AMERICAN INVITATIONAL
MATHEMATICS EXAMINATION
(AIME)

Tuesday, March 26, 2002

1. DO NOT OPEN THIS BOOKLET UNTIL TOLD TO DO SO BY YOUR PROCUTOR.
2. This is a 15-question, 3-hour examination. All answers are integers ranging from 000 to 999, inclusive. Your score will be the number of correct answers; i.e., there is neither partial credit nor a penalty for wrong answers.
3. No aids other than scratch paper, graph paper, ruler, compass, and protractor are permitted. In particular, calculators are not permitted.
4. A combination of the AIME and the American Mathematics Contest 10 or the American Mathematics Contest 12 scores are used to determine eligibility for participation in the U.S.A. Mathematical Olympiad (USAMO). The USAMO will be given on FRIDAY and SATURDAY, May 3 & 4, 2002.
5. Record all of your answers, and certain other information, on the AIME answer form. Only the answer form will be collected from you.

The publication, reproduction, or communication of the problems or solutions of the AIME during the period when students are eligible to participate, seriously jeopardizes the integrity of the results. Duplication at any time via copier, telephone, email, world wide web, or media of any type is a violation of the copyright law.

- Many states use a sequence of three letters followed by a sequence of three digits as their standard license-plate pattern. Given that each three-letter three-digit arrangement is equally likely, the probability that such a license plate will contain at least one palindrome (a three-letter arrangement or a three-digit arrangement that reads the same left-to-right as it does right-to-left) is m/n , where m and n are relatively prime positive integers. Find $m + n$.
- The diagram shows twenty congruent circles arranged in three rows and enclosed in a rectangle. The circles are tangent to one another and to the sides of the rectangle as shown in the diagram. The ratio of the longer dimension of the rectangle to the shorter dimension can be written as $\frac{1}{2}(\sqrt{p} - q)$, where p and q are positive integers. Find $p + q$.

- Jane is 25 years old. Dick is older than Jane. In n years, where n is a positive integer, Dick's age and Jane's age will both be two-digit numbers and will have the property that Jane's age is obtained by interchanging the digits of Dick's age. Let d be Dick's present age. How many ordered pairs of positive integers (d, n) are possible?
- Consider the sequence defined by $a_k = \frac{1}{k^2 + k}$ for $k \geq 1$. Given that $a_m + a_{m+1} + \dots + a_{n-1} = 1/29$, for positive integers m and n with $m < n$, find $m + n$.
- Let $A_1, A_2, A_3, \dots, A_{12}$ be the vertices of a regular dodecagon. How many distinct squares in the plane of the dodecagon have at least two vertices in the set $\{A_1, A_2, A_3, \dots, A_{12}\}$?
- The solutions to the system of equations

$$\begin{aligned} \log_{225} x + \log_{64} y &= 4 \\ \log_x 225 - \log_y 64 &= 1 \end{aligned}$$

are (x_1, y_1) and (x_2, y_2) . Find $\log_{30}(x_1y_1x_2y_2)$.

7. The Binomial Expansion is valid for exponents that are not integers. That is, for all real numbers x , y , and r with $|x| > |y|$,

$$(x + y)^r = x^r + rx^{r-1}y + \frac{r(r-1)}{2!}x^{r-2}y^2 + \frac{r(r-1)(r-2)}{3!}x^{r-3}y^3 + \dots$$

What are the first three digits to the right of the decimal point in the decimal representation of $(10^{2002} + 1)^{10/7}$?

8. Find the smallest integer k for which the conditions

- (1) a_1, a_2, a_3, \dots is a nondecreasing sequence of positive integers
- (2) $a_n = a_{n-1} + a_{n-2}$ for all $n > 2$
- (3) $a_9 = k$

are satisfied by more than one sequence.

9. Harold, Tanya, and Ulysses paint a very long picket fence.

Harold starts with the first picket and paints every h^{th} picket;

Tanya starts with the second picket and paints every t^{th} picket; and

Ulysses starts with the third picket and paints every u^{th} picket.

Call the positive integer $100h + 10t + u$ *paintable* when the triple (h, t, u) of positive integers results in every picket being painted exactly once. Find the sum of all the paintable integers.

10. In the diagram below, angle ABC is a right angle. Point D is on \overline{BC} , and \overline{AD} bisects angle CAB . Points E and F are on \overline{AB} and \overline{AC} , respectively, so that $AE = 3$ and $AF = 10$. Given that $EB = 9$ and $FC = 27$, find the integer closest to the area of quadrilateral $DCFG$.

11. Let $ABCD$ and $BCFG$ be two faces of a cube with $AB = 12$. A beam of light emanates from vertex A and reflects off face $BCFG$ at point P , which is 7 units from \overline{BG} and 5 units from \overline{BC} . The beam continues to be reflected off the faces of the cube. The length of the light path from the time it leaves point A until it next reaches a vertex of the cube is given by $m\sqrt{n}$, where m and n are integers and n is not divisible by the square of any prime. Find $m + n$.
12. Let $F(z) = \frac{z+i}{z-i}$ for all complex numbers $z \neq i$, and let $z_n = F(z_{n-1})$ for all positive integers n . Given that $z_0 = \frac{1}{137} + i$ and $z_{2002} = a + bi$, where a and b are real numbers, find $a + b$.
13. In triangle ABC , the medians \overline{AD} and \overline{CE} have lengths 18 and 27, respectively, and $AB = 24$. Extend \overline{CE} to intersect the circumcircle of ABC at F . The area of triangle AFB is $m\sqrt{n}$, where m and n are positive integers and n is not divisible by the square of any prime. Find $m + n$.
14. A set \mathcal{S} of distinct positive integers has the following property: for every integer x in \mathcal{S} , the arithmetic mean of the set of values obtained by deleting x from \mathcal{S} is an integer. Given that 1 belongs to \mathcal{S} and that 2002 is the largest element of \mathcal{S} , what is the greatest number of elements that \mathcal{S} can have?
15. Polyhedron $ABCDEFGH$ has six faces. Face $ABCD$ is a square with $AB = 12$; face $ABFG$ is a trapezoid with \overline{AB} parallel to \overline{GF} , $BF = AG = 8$, and $GF = 6$; and face CDE has $CE = DE = 14$. The other three faces are $ADEG$, $BCEF$, and EHG . The distance from E to face $ABCD$ is 12. Given that $EG^2 = p - q\sqrt{r}$, where p , q , and r are positive integers and r is not divisible by the square of any prime, find $p + q + r$.

Your Exam Manager will have a copy of the 2002 AIME Solution Pamphlet.

WRITE TO US:

Correspondence about the problems and solutions should be addressed to:

Mr. David Hankin, AIME Chair
Hunter College High School, Dept. of Mathematics, 71 East 94th St., New York, NY 10128 USA
Phone: 212/860-1281; Fax: 718/891-3312; email: xhankin@juno.com

Orders for any publications listed below should be addressed to:

Titu Andreescu, Director
Mathematical Association of America / American Mathematics Competitions
University of Nebraska, P. O. Box 81606, Lincoln, NE 68501-1606
Phone: 402/472-2257; Fax: 402/472-6087; tandreescu2@unl.edu; <http://www.unl.edu/amc>

2002 USAMO

THE USA MATHEMATICAL OLYMPIAD (USAMO) is a 6-question, 9-hour, essay-type examination. The USAMO will be held on Friday and Saturday, May 3 & 4, 2002 at a central site – Cambridge MA. Your teacher has more details on who qualifies for the USAMO in the AMC 10/12 and AIME Teachers' Manuals. The best way to prepare for the USAMO is to study previous years of these exams, the World Olympiad Problems/Solutions and review the contents of the Arbelos. Copies may be ordered as indicated below.

PUBLICATIONS

MINIMUM ORDER: \$10. (before shipping/handling fee), PAYMENT IN US FUNDS ONLY made payable to the American Mathematics Competitions or VISA/MASTERCARD/AMERICAN EXPRESS accepted. Include card number, expiration date, card holder name and address. U.S.A. and Canadian orders must be prepaid and will be shipped Priority Mail, UPS or Air Mail.

INTERNATIONAL ORDERS: Do NOT prepay. An invoice will be sent to you.

COPYRIGHT: All publications are copyrighted; it is illegal to make copies or transmit them on the internet without permission.

Examinations: Each price is for one copy of an exam and its solutions for one year. Specify the years you want and how many copies of each. All prices effective to September 1, 2002.

- 👉 AHSME (AMC 12) 1989-2002, \$1 per copy per year.
- 👉 AIME 1989-2002, \$2.00 per copy per year
- 👉 USA and International Math Olympiads, 1989-1999, \$5 per copy per year
2000, \$14 per copy
- 👉 National Summary of Results and Awards, 1989-2000, \$10 per copy per year
- 👉 Problem Book I, AHSMEs 1950-60, Problem Book II, AHSMEs 1961-65, \$10/ea
- 👉 Problem Book III, AHSMEs 1966-72, Problem Book IV, AHSMEs 1973-82, \$13/ea
- 👉 Problem V, AHSMEs and AIMEs 1983-88, \$30/ea. Problem Book VI, 1989-1994, \$24/ea
- 👉 USA Mathematical Olympiad Book 1972-86, \$18/ea
- 👉 International Mathematical Olympiad Book I, 1959-77, \$20/ea
- 👉 International Mathematical Olympiad Book II, 1978-85, \$20/ea
- 👉 World Math Contests/Solutions 1996-97, 1997-98, \$15/ea; 1998-99, \$25/ea
- 👉 The Arbelos, Volumes I-V, and a Special Geometry Issue, \$8/ea

Shipping & Handling: Charges for Publication Orders:

<u>Order Total</u>	<u>Add:</u>
\$10.00 – \$30.00	\$ 5
\$30.01 – \$40.00	\$ 7
\$40.01 – \$50.00	\$ 9
\$50.01 – \$75.00	\$12
\$75.01 – up	\$15
